A / PRODUCT DEMO

The owner’s control surface.

Actual dashboard UI from a browser check; balances and agent state are illustrative test fixtures, not live funds.

REHEARSAL CHECKLIST

1. Inspect the rules

Show payee, cap and expiry.

2. Show the receipt

Open the explorer transaction.

3. Trigger a refusal

Explain why no funds move.

B / AUTHORIZATION BOUNDARY

A policy the agent cannot remove.

01

Agent signs

Its own Ed25519 key.

→

02

Account verifies

Signature + covenant.

→

03

Call executes

Only inside the rules.

FIXED AT CREATION

Signer, allowlists, policy binding.
No management rule to remove them.

OWNER CONTROLS

Numeric limits, expiry, revocation.
Recovery without the agent’s key.

Source: README.md and agent-account/covenant-policy implementation. Recovery remains subject to the token allowance.

C / POOL ACCOUNTING

Spent funds never become a new budget.

Example: one agent draws 10 USDC and spends 3.

10

DRAWN

Advanced to the agent

3

SPENT

Settled as consumed

7

RECOVERED

Returned on closure

Only the unused 7 is released for another allocation.

Illustrative arithmetic from README.md, “Deployed cash-pool accounting v2”; amounts are not usage metrics.

D / DELIVERY STATUS — 26 OCT 2026

What ships today. What comes next.

TESTNET	**Shared pool + covenants**	Cash-only v2; x402 payment evidence.
TESTNET	**Native payment mandates**	Exact or budget grants; on-chain receipts. Released 26 Oct.
LOCAL BUILD	**DeFindex yield backing**	Cash-first draws; shares held by pool.
NEXT	**Distribution + pilots**	SDK on npm; x402 rehearsal on the new release; pilots.

Sources: README.md; docs/MANDATES.md; docs/YIELD.md; docs/SDK.md. Local work does not upgrade immutable deployments.

E / EVIDENCE, WITH SCOPE

Inspect the evidence.

547

tests passing on main

152 contracts
267 dashboard
79 SDK · 49 signer

USDC / LEGACY POOL

0.01 USDC paid over x402

781a5f2b... · API content returned

XLM / ISOLATED V2 POOL

Complete cash lifecycle

Pay, revoke, recover, close; testnet XLM

PRE-SUBMISSION SIMULATION

Unapproved payee refused

PayeeNotAllowed · no submitted transaction

547 = test run on main, 2026-10-26: 152 Rust, 267 dashboard, 79 SDK, 49 signer; excludes one optional ignored fixture test and six opt-in network tests.

F / ADOPTION

Built to be adopted by agents.

01 Give the agent the guide

agent.md · llms.txt · Claude Code plugin

02 Approve with your own wallet

Agent prepares. Owner reviews and signs.

03 Integrate the TypeScript SDK

Pools, payments, signing and recovery.

@kovan-protocol/sdk@0.1.0 is on npm. Guide: kovan-protocol.vercel.app/agent.md

G / JUDGE Q&A

A spending boundary, not a guarantee.

Can prompt injection still do harm?

Yes—within an approved budget and payee list.

Does a receipt prove the task succeeded?

It proves payment, not delivery or correctness.

Can the owner get spent funds back?

Recovery returns the remaining wallet balance.

Is it ready for real customer funds?

Testnet prototype; review and audit come first.
